

# The Minimal Maintenance Evaporative Cooling System

With Acme's Seamless  
Plastic Guttering System

The new Acme PKS guttering system was designed to minimize maintenance requirements for Kool Cel pad systems. This new system features an innovative water distribution system for Kool Cel pads. Featuring continuous plastic gutters on both the top and bottom, the PKS system provides for simple plumbing and leak free operation. In addition, the system can be optionally configured with Acme's Kool Flow™ water control system to significantly increase the life of the pads by automating the regular maintenance of flushing the system to keep the water clean and the pads fresh. Contact Acme today for more information about how Acme can increase the performance and life of your evaporative cooling system.
